

## Implement a Program on Packages.

1)

//Save by A.java package

mypack;

public class A

{

    public static void msg()

    {

        System.out.println("Welcome to Package!!");

    }

}

//Save by B.java

package mypack; import

mypack.\*;

class B

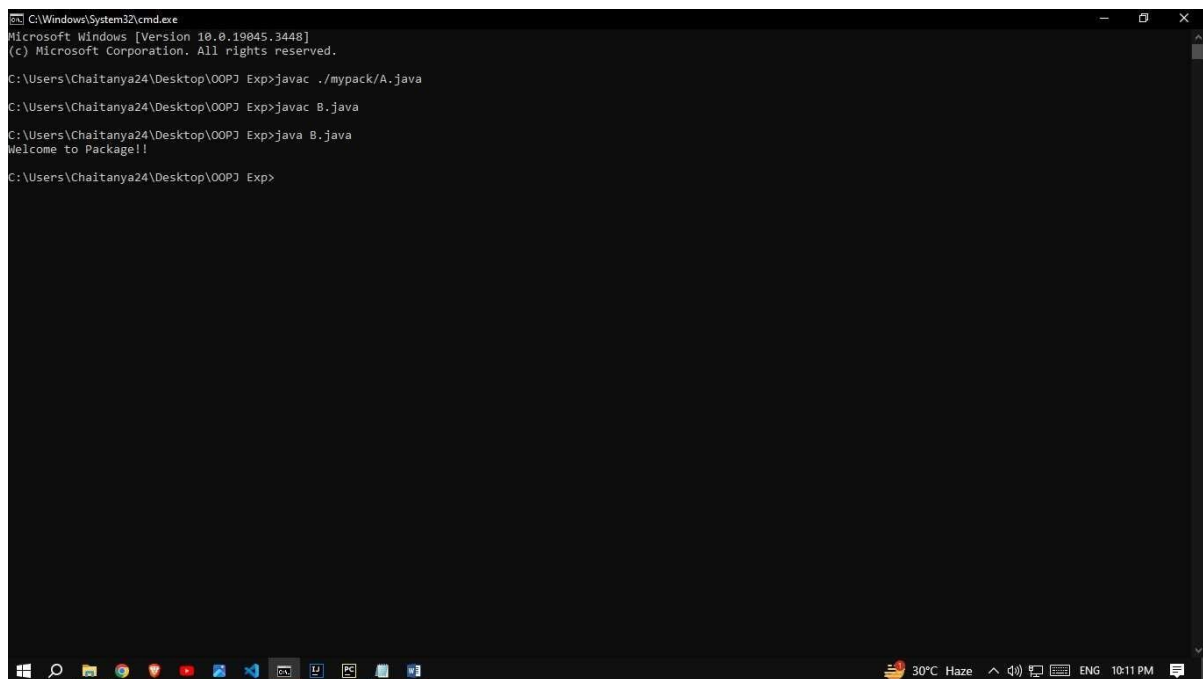

{

    public static void main(String args[])

    {

```
A obj=new A();  
  
obj.msg();  
  
}  
  
}
```

Output:

```
C:\Windows\System32\cmd.exe  
Microsoft Windows [Version 10.0.19045.3448]  
(c) Microsoft Corporation. All rights reserved.  
  
C:\Users\Chaitanya24\Desktop\OOPJ Exp>javac ./mypack/A.java  
C:\Users\Chaitanya24\Desktop\OOPJ Exp>javac B.java  
C:\Users\Chaitanya24\Desktop\OOPJ Exp>java B.java  
Welcome to Package!!  
C:\Users\Chaitanya24\Desktop\OOPJ Exp>
```

The screenshot shows a Windows command prompt window with a black background and white text. The window title is 'C:\Windows\System32\cmd.exe'. The text inside shows the user running several Java commands: 'javac ./mypack/A.java', 'javac B.java', and 'java B.java'. The output of the last command is 'Welcome to Package!!'. The Windows taskbar is visible at the bottom, showing the time as 10:11 PM and the temperature as 30°C.
